Body -
Not Replaceable

Assemble with lip side of seal facing bottom of piston.

USE ONLY ONE GASKET

See IS-2100 for machining and installation instructions. Lubricate all seals with clean hydraulic oil prior to assembly. DO NOT USE SILICONE BASED LUBRICANTS

INSTALLATION TORQUE:
 -Metal Gasket = 40 ft-lb
 -Composite Gasket = 20 ft-lb
 *Cylinders may need to be re-torqued after a break-in period of 3 weeks or 2,500 cycles for both gasket styles.

Both metal and composite gaskets are supplied. Use only one gasket. The metal gasket is recommended when the cavity seal surface has every smooth finish and is flat and perpendicular to the minor diameter. The metal gasket must be torqued to a higher value, which is more resilient to machining vibrations providing long term sealing. The composite gasket is recommended when the cavity seal surface has a rough surface finish or is not flat.
